A Profession Company in Designing and Manufacturing of Optical Film

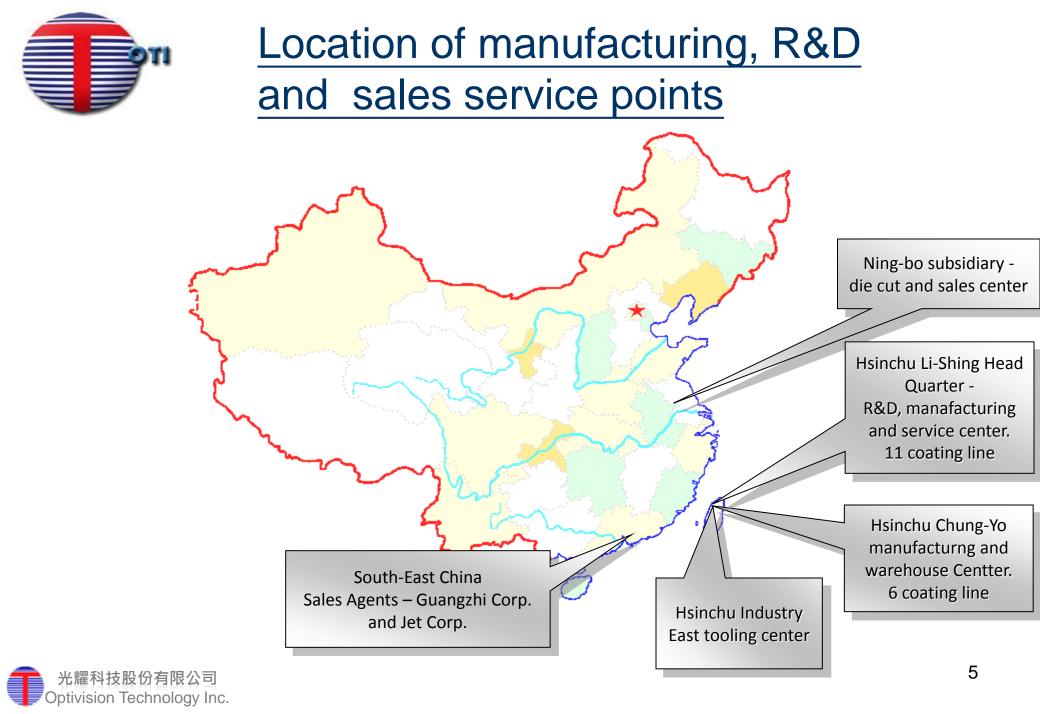

- Optivision(OTI) is a professional manufacturer of optical film which is the key component of LCD backlight module.
- OTI provides various types of optical films including brightness enhancement files(BEF), diffusers, turning films and light guide films, which are applied to different sizes of LCD backlight module.

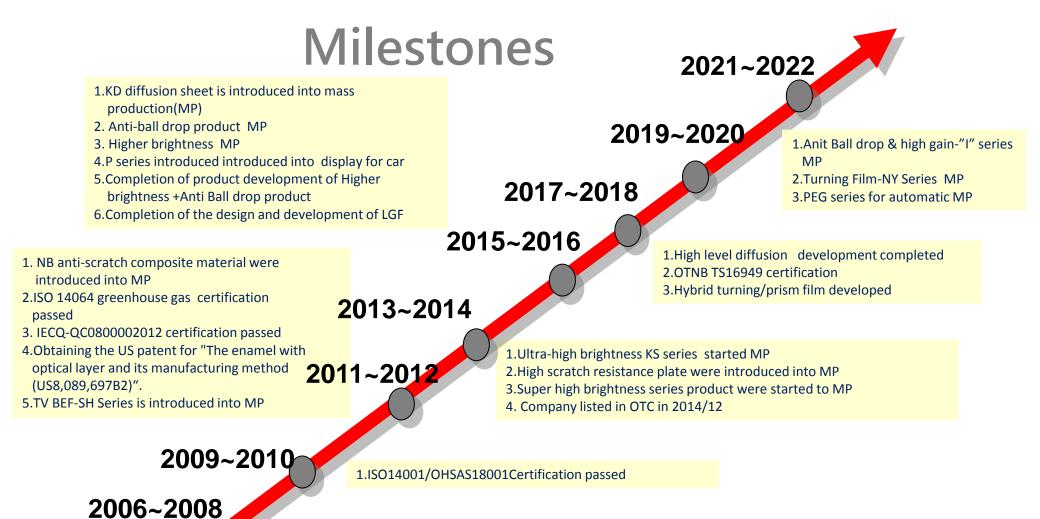

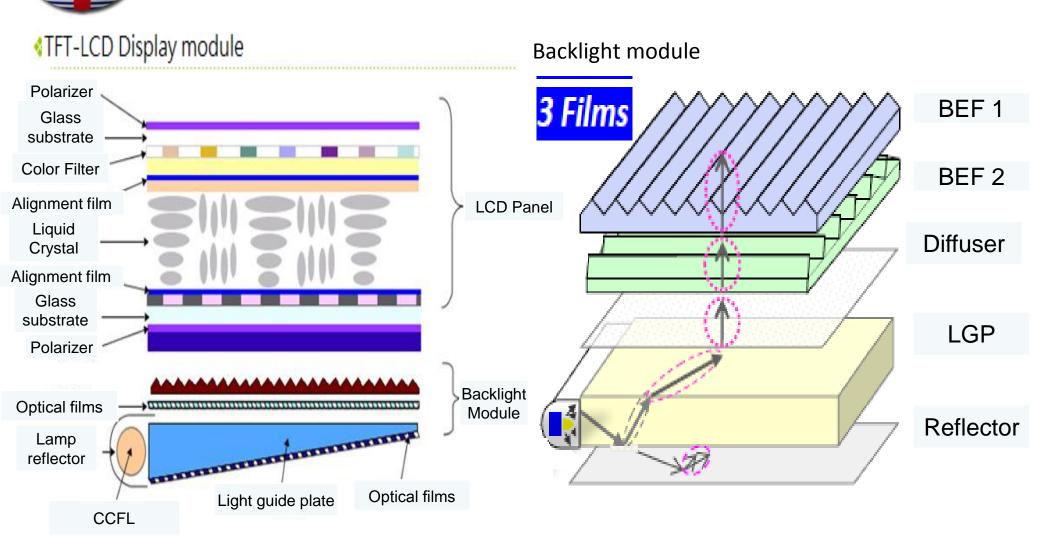

1.2006-Passed ISO9001:2008 certification 2. Green Products / IECQ-QC080000 Certification 3. Ningbo optivision was established (cutting line)

2004

Optivision Technology Inc.

Optivision established

LCD Panel and Backlight Module

Liquid Crystal Display

Based on the different sizes of the liquid crystal display, the size of optical films are categorise as below. :

- •Small size -1.x"~4.x"(For low functional mobile phone > feature phone, DSC)
- •Small to medium size-4.x"~10.x"(For smart phone > PND > Tablet PC)
- •Medium size-10.x"~17.x" (Car dashboard > Notebook)

- Mobile TV

Monitor

- Although the international epidemic has slowed down, the global consumer market has been slow to recover due to the turmoil in the global financial system caused by the strong US dollar, high inflation, high interest rate, and the Russian-Ukrainian war.
- The epidemic in China continues, and the policy of dynamic clearing is adhered to. The social blockade and control are still in progress, which greatly affects the global supply chain and causes a sluggish domestic consumer market in China.
- The end consumer market (including mobile, phones, laptops) is still under low demand and a large amount of inventory has accumulated on the sales side. All companies from the sales side aim to reduce inventory and reduce purchases.
- In response to sluggish consumption and increased inventory, backlight module manufacturers and panel manufacturers have affected their willingness to develop new products and models to the market.

The Trend of Market and Product Development

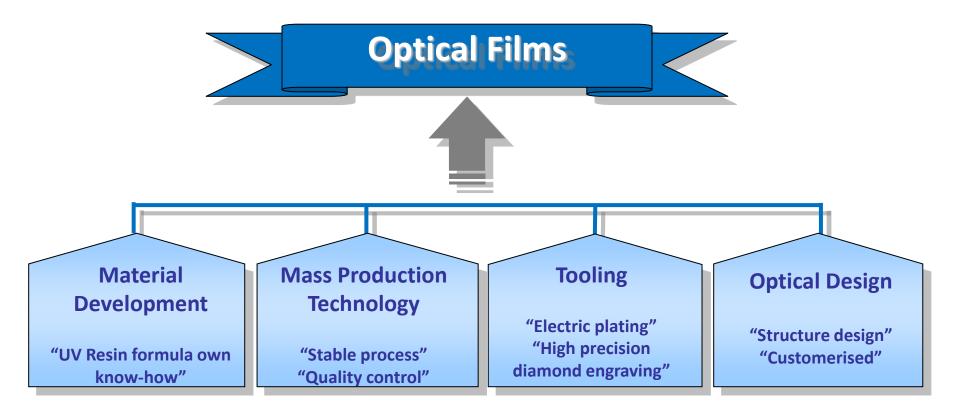

- Environmental protection, energy saving and electricity saving in response to the international trend of energy saving and carbon reduction
- Improving the thinness of product in response to consumer demand for lighter and thinner end products °
- Brightness and Contrast Improvement Brightness can reduce the use of light sources; contrast can improve the taste and functional application of the panel
- Development of integrated multi-functional optical films simplifying the structure of backlight modules, in response to green environmental protection, low process pollution, in order to increase the added value of products
- Optical film for auto application Continue to develop demand and dashboard and control panel for driver and passenger °

Based on the market change and trend of product development, OTI engages in the research and development on the be below four categories to provide the products for the present and the future

The Operating Strategy and Chances under Current Situation

- OTI continues to carry out new product development and product optimization, including light guide films, high brightness turning films, and low-carbon microstructure diffusers.
- Continuously engages process optimization and innovation to improve product yield and production efficiency, including the application of AI technology in process inspection and statistics.
- Continuously develops new materials to improve product performance, reduce costs and reduce carbon emission.
- Cooperation with panel manufacturers and backlight module manufacturers to develop new applications and new products
- Continue to optimize the product mix and develop new products with high gross profit to reduce the pressure from the customers to reduce their procurement costs

Summary of Consolidated Income Statements
